

# Setting up GitHub Codespace for the tutorial

[github.com/sdtemple/how-to-use-ai](https://github.com/sdtemple/how-to-use-ai)

1. Fork the repository (upper right-hand button).  
Click Create a new fork.

2. Go to your forked version of the repository.
3. Create a codespace in the drop-down menu of Code.  
(Click <>Code, then Codespace, and finally +.)

4. If your codespace has a network error, possibly due to firewalls, try a different browser.
